

Intermediate Light Resin Transfer Molding CM 203

Closed Mold University

Welcome to Closed Mold University and Intermediate Light Resin Transfer Molding CM203. This is the class you need to move beyond the demos and the basics. Closed Mold University and the Closed Mold Alliance are dedicated to providing hands-on opportunities for the advanced education of closed mold technologies.

Intermediate Light Resin Transfer Molding CM203 will provide a refresher course focusing on tooling processing, Light RTM

troubleshooting, and lean manufacturing concepts. Light RTM is a versatile process that is perfect for a variety of parts and shapes. In this class you will see the advantages of converting to Light RTM first-hand. The class will feature a dynamic resin-flow demonstration using a specially-made glass table designed to offer you advanced troubleshooting techniques. Participants will also take part in interactive discussions on process and theory review, basic waxing techniques, best practices, and A-side cosmetics.

In addition, several closed mold suppliers will make presentations on equipment systems, process practices, and the product selection needed for a successful Light RTM shop.

Education for Those Serious About Closed Mold

Intermediate Light Resin Transfer Molding CM203
CCP Tech Center
821 E. 16th Avenue
N. Kansas City, Missouri 64116
August 12-13, 2009

This opportunity was made possible in part by:

Course Overview CM203

Day One

- Troubleshooting with Glass Panel Demonstrations
- Light RTM Injection Demonstration
- Equipment Review by Magnum Venus Plastech
- Product Review including Resin Systems and Barrier Coats
- The Economics of Closed Mold including Lean Concepts
- Best Practice Concepts

Day Two

- Master Plug & Pattern Review
- Material Selection - Tooling Product Review
- Waxing Introduction
- Building the Counter Mold

Intermediate Light Resin
Transfer Molding CM203
Registration Form

August 12-13, 2009
