

## WIND ENERGY – Products & Supplies

**People, Products, Process, Performance.** These four words differentiate Composites One and illustrate the powerful partnership that we forge with every customer.

In the growing North American wind energy markets, Composites One puts you in touch with power generation experts who can help your company find the right materials for repair or building components...quickly and locally. And if your manufacturing team is in need of glass and carbon fiber reinforcements, epoxy, resins, gel coats and other core materials needed for producing rotor blades, nacelles, hubs and other high performance wind energy components, we have that, too. Plus the technical support, local customer service and value-added service that will help you sharpen your edge and breeze by the competition.

**That's the power of Partnership. The Power of One – Composites One.**
