KITTING SOLUTIONS

Innovative. Dependable. Results.

Kitting Solutions

Welcome to Aerovac, a major manufacturer, developer and supplier of process materials, tooling and services used in prepreg processing, vacuum infusion, glass lamination, and other industrial applications. As part of Composites One, North America's leading distributor of composites, we're uniquely positioned to provide customers with next-gen product and supply chain innovations that are stored locally, priced competitively, delivered on-time, every time, and supported by more than 100 technical product experts worldwide.

Innovative. Dependable. Results. That's Aerovac. The better way of doing business.

WHY MANUFACTURERS NEED KITTING

Before composites manufacturers can start up production, their technicians have to make sure that everything needed – breather fabrics, vacuum bagging film, release films, peel ply, sealant tape and other consumables – are in stock in the right quantities. They also have to spend time cutting materials to the precise size for the mold.

But when materials are cut improperly or at the last minute, it can result in errors impacting part quality and performance, causing unnecessary waste and lost productivity.

Innovative Solution from Aerovac

Aerovac has the solution. For years, we've offered a competitively priced kitting service in which skilled technicians from Aerovac cut the materials manufacturers need for their projects, accurately and economically. These experts are adept at nesting properly sized ply shapes in the exact order that manufacturers need, saving them time, money and effort.

Choose from Three Different Options

Three different types of Aerovac kits are available, so that manufacturers can choose the option best for their needs. They include:

Basic Kits – Contain all materials needed, sized to widths per customer specifications. Ideal for standard projects, high volume jobs and large shaped molds

Intermediate Kits – Packs of precut, shaped materials, grouped by product type

Full Kits – Perfect for 3D shaped combination products, kits contain all the materials needed for a single composites structure

Local Service and Support

Materials for kits are stored at Aerovac's locally based distribution centers in carefully monitored temperature, humidity and particulate-controlled environments, protecting them until they're needed. Kits are packed and delivered on time, according to manufacturers' production schedules. Backing up this innovative kitting service is local support provided by Composites One and Aerovac's Team of 100+ technical product experts.

**Multiple AS9120, AS9100,
EN9100 & ISO 9001
certified locations**

**Aerospace, Wind Energy, Marine,
Glass Lamination and other
Industrial Sectors**

**Product selection and technical
application experts located
around the world**

WHY KITTING FROM AEROVAC?

By purchasing vacuum bagging films and other consumables in kit form from Aerovac, manufacturers can:

- Increase productivity and reduce downtime
- Make smarter, more economical material purchases
- Reduce unnecessary material handling
- Eliminate time spent manually cutting materials to size
- Prevent errors due to last-minute cutting
- Standardize workflow, improving quality
- Free up storage space for other needs
- Reduce waste and save even more

Need Help?

For assistance choosing the best kit for your application, contact your local Aerovac representative. For more information, go to aerovac.com.

THE NEW AEROVAC

Our Mission:

To enable customer success by serving as their complete vacuum bagging and process materials solution.

Our Promise:

Innovative
Dependable
Results

Aerovac makes it easy for customers to source product, identify the right supply chain solutions, and efficiently utilize high quality process materials. So you can focus on engineering end-products, growing revenue, and delivering results. Aerovac. It's the better way of doing business.

Focused on Innovation

At Aerovac, innovation is at the heart of everything we do. It starts with listening to customers so we can understand their needs, and apply the right technologies and services to deliver proven results.

Focused Expertise

Aerovac's approach is to put the customer first. We listen. We advise. And then we respond, with innovative products custom formulated to meet each customer's requirements, setting us apart from the competition.

The Aerovac Difference

**Global
Footprint**

**Dependable
Service**

**Experienced
Technical Support**
