WHAT WILL BE COVERED

- Gel coat application and troubleshooting
- Patching and repair techniques
- Equipment troubleshooting
- Proper material selection
- Hands-on technique workshops
- Material handling safety

COURSE DESCRIPTION

This excellent Gel Coat Application and Repair course is designed to introduce and expand on a working knowledge of gel coat materials, application, and repair skills. Classroom sessions provide background for hands-on workshops intended to offer practical tips and techniques for better quality parts. Participants will be involved in individual projects during three different workshops:

Material Application Workshop

Tips and techniques for proper material application will be covered during this workshop. A full team of Polynt Composites Technical Service experts will answer your questions about your gel coat application process. A variety of spray equipment and mold configurations are available for hands on activities.

Spray Equipment Workshop

An emphasis will be placed on spray equipment set-up and maintenance including shut-down, start-up and troubleshooting. Representatives from MVP (Magnum Venus Plastech) will be on-hand to offer specific advice.

Note: Some hands on activities will require the use of a respirator. Participants should furnish their own if possible. Fit testing and respirators may be available for a nominal fee.

Repair and Surface Finishing Workshop

Repair and surface finishing will be covered in detail with attendees participating in each step of the process.
